

**Centers for Disease Control and Prevention  
1600 Clifton Road  
Atlanta, GA 30329 USA**

**Dear CDC:**

**Aluminum adjuvants are known neurotoxins. The amount of aluminum contained in the Hepatitis vaccine for infants has been shown to be inaccurate. Some are too high, some are too low, and not one has had a safety test. Aluminum adjuvants are responsible for autism and childhood cancers as they were found to be in animals.**

**Your VIS risk factors are not applicable to the 3.9 million newborns getting vaccinated and should not be administered in the hospitals without parental consent by signature.**

**Please remove this vaccine from the childhood schedule until you can prove that it is necessary for mothers that test negative. Please remove this vaccine from the school schedule K-12 until you can prove it is necessary and can provide it aluminum free.**

**Thank You,**
